Cleaning & Maintenance

As with any finished building product, your Lauxes anodised aluminium floor grate requires cleaning to function at its best. With our easy roll out system, customers can simply pull out the top tray for accessible and frequent cleaning. To hold their high-end value, maximise longevity and maintain their warranty, all anodised aluminium grates must be washed down on a regular basis (at least once every three months and more often some instances). Soot and grime often contain moisture and salts which will adversely affect the anodised finish if left on for extended periods of time. No abrasive or harsh chemicals, such as acidic or alkaline products must be used on or near the grates. Always refer to cleaning product labels prior to use, to avoid damage to the grates and other accessories. Look out for labels that state 'not to be used on aluminium' specifically.

INSTALLATION

Installation

Click the icon below to download the installation manual PDF of this product.

Custom production or simple DIY onsite assembly

We can fully customise and assemble for you or can provide all the parts for your installer to assemble (see options). Or if you want full flexibility yo can order a sufficient length and simply cut the tray and/or drill the outlet hole on site. There is **no welding required** - simply assemble with adhesive silicone.

1. Choose your length of drain - we will cut and supply the exact length (drain length includes the endcaps)
2. Choose whether you wish us to pre-install the end caps on the tray (we use high quality adhesive silicone) or whether the installer will do this (provides flexibility if you may wish to cut tray shorter)
3. Choose whether you wish us to drill the outlet hole and glue on, or simply provide the outlet for the installer to assemble (provides flexibility for installer to choose outlet position)
